AI Engineer with experience developing Generative AI applications using Python, LangChain, FastAPI, and ChromaDB. Built end-to-end Retrieval-Augmented Generation (RAG) systems, LLM-powered applications, and AI workflows integrating document retrieval, prompt engineering, vector search, and REST APIs. Gained industry experience through AI Engineering and SAP APO internships, with a strong interest in building scalable, production-ready AI solutions.

TECHNICAL SKILLS

- **Languages & Query:** Python, C++, SQL
- **Generative AI & LLMs:** Prompt Engineering, RAG Pipelines, Agentic AI, Tool Use / Function Calling
- **Frameworks and Libraries:** LangChain, Scikit-learn, FastAPI, Pydantic
- **Machine Learning:** Supervised Learning, Unsupervised Learning, Feature Engineering, Model Evaluation, Pandas, NumPy, Matplotlib, Seaborn
- **Vector Database:** ChromaDB
- **Databases:** PostgreSQL
- **Developer Tools:** Git/GitHub, Jupyter Notebook, Cursor, Claude Code, Codex, ChatGPT

WORK EXPERIENCE

Tech Intern | Henkel DX

April 2026 – Present

- Supported SAP APO Demand Planning (DP) processes by configuring Planning Areas, Planning Books, Data Views, Characteristics Value Combinations (CVCs), and Time Bucket Profiles.
- Configured SAP APO master data components including Planning Areas, Planning Books, Data Views, CVCs, and Time Bucket Profiles to support demand forecasting.
- Resolved SAP APO production issues by analyzing planning inconsistencies, troubleshooting system errors, and collaborating with functional consultants and business users.

AI Engineering Intern | Innomatics Research Labs

Feb 2026 – May 2026

- Engineered Agentic AI applications using Python, LangChain, FastAPI, and Large Language Models (LLMs), enabling intelligent workflow automation and AI-assisted decision-making.
- Designed reusable prompt templates and structured output pipelines to improve response consistency and modularity across LLM-powered applications.
- Built Retrieval-Augmented Generation (RAG) pipelines using vector embeddings, semantic retrieval, and Pydantic validation to improve response quality for enterprise document search.

PROJECTS

DocSense AI - Multi-Document RAG Knowledge Assistant - [Link](#)

- Developed an end-to-end Retrieval-Augmented Generation (RAG) assistant enabling semantic search and question answering across PDF, DOCX, and TXT documents.
- Built an automated ingestion pipeline to process, chunk, embed, and index over 100 legal documents using LangChain and ChromaDB.
- Tech Stack: Python | LangChain | FastAPI | ChromaDB

NewsLens AI — Real-Time AI News Summarization Assistant- [Link](#)

- Developed an AI-powered news summarization system that retrieves the top five AI news articles using Tavily Search and generates concise summaries using ChatGroq.
- Designed a modular LangChain pipeline integrating prompt templates, output parsers, and ChatGroq for reusable LLM workflows.
- Integrated external APIs, prompt engineering, and configuration management to create a scalable and maintainable Generative AI application.

CERTIFICATIONS

- Oracle Cloud Infrastructure (OCI) -AI Foundations Associate
- Business and Data Analytics -Beginner -Infosys Springboard

EDUCATION

B.Tech ECE

2022 – 2026

BMS Institute of Technology and Management , Bengaluru | CGPA: 8.2
